

A spin around JavaScript and ARIA

Blind *and* in a wheelchair...

You don't know that you don't know

a11y

a c c e s s i b i l i t y

1 2 3 4 5 6 7 8 9 10 11

The diagram shows the word 'accessibility' in a black serif font. The letters 'c', 'c', 'e', 's', 's', 'i', 'b', 'i', 'l', 'i', and 't' are highlighted in magenta. Below these letters are indices 1 through 11. Vertical dashed magenta lines are positioned at the start of index 1 and the end of index 11. A horizontal black line with vertical end-caps connects these two dashed lines. A downward-pointing arrow originates from the center of this horizontal line.

a 1 1 y

For everyone

#a11y

@vavroom

On every device

Assistive Technologies (AT)

- **Screen readers**
- **Keyboard**
- **Dragon Naturally Speaking**
- **Sip & puff switch**
- **Eye tracking**
- **etc...**

**People with disabilities are,
by far, the largest minority
group on the web**

Sighted keyboard-only user

Temporary impairments!

#a11y

@vavroom

Technical challenge

#a11y

@vavroom

**Meeting
requirements
doesn't always
ensure
accessibility**

#a11y

@vavroom

**Involve real users with disabilities
in your testing process**

**Barriers aren't just for
people with disabilities**

JS

Ye goode olde days

97%

<http://webaim.org/projects/screenreadersurvey5/#javascript>

JS to increase accessibility

- Additional information
- Warnings
- Instructions
- Warning for timed responses
- Giving additional time

Information interpretable as text

e.g. Progress bar - indicate progress in text.

Focus management

#a11y

@vavroom

Keyboard navigation

Tab

SHIFT + Tab

ENTER

Spacebar

Focusable elements

- **Links**
- **Buttons**
- **Form elements**
- **iframe**
- **etc**

Exhaustive list on:

<https://allyjs.io/data-tables/focusable.html>

Focus on non-focusable elements

`tabindex="0"`

To allow keyboard
focus for user.

`tabindex="-1"`

To allow programmatic
focus

Positive tabindex

Accessible modal window

- Doesn't appear in normal tab order
- Captures keyboard until window closed
- Sets focus on heading
- Close with "esc" or close button

Working example:

<http://bit.ly/accessible-modal>

Event handlers

Device dependent

- **Mouse**
or
- **Keyboard**

Device independent

- **Mouse**
and
- **Keyboard**
and
- **Other means**

Event pairing

Pair mouse events with nearest keyboard equivalent

`mousedown / keydown`

**Focus on purpose,
not mechanics of action**

Modifying default behavior

```
object.addEventListener("mouseover", myScript);
```

```
object.addEventListener("mouseout", myScript);
```

```
object.addEventListener("focus", myScript);
```

```
object.addEventListener("blur", myScript);
```

```
object.addEventListener("click", myScript);
```

```
object.addEventListener("dblclick", myScript);
```

Dynamic content

1. Can you trigger content with keyboard?
2. Is content accessible?

WAI-ARIA

Accessible

Rich

Internet

Applications

**A technical spec by the W3C to help increase accessibility of the web,
particularly dynamic content and user interfaces**

1st rule of ARIA

"Don't use ARIA (unless it is necessary)"

Semantics vs WAI-ARIA

A `<button>` is a button

a `<div>` is a div

Why change default behavior?

Triggered and focused with keyboard only

<http://bit.ly/button-div>

ARIA Roles

```
<form role="search">
```

```
<div role="tooltip">
```

```
<input type="text" role="alert">
```

```
<input type="image" role="slider">
```

ARIA Properties and States

```
<input aria-required="true">
```

```
<input aria-labelledby="errmsg">
```

```
<button aria-expanded="false">
```

```
  <div aria-hidden="true">
```

```
    <div aria-live="assertive">
```

Live Regions

```
<div aria-live="off">
```

Live Regions

```
<div aria-live="polite">
```

Live Regions

```
<div aria-live="assertive">
```

Questions?

Thank you!
